

Practical Project: Custom Content Generator

Good day

Please note this is an individual Project that should be completed and submitted this **Friday before 16:00**.

Custom Content Generator Description:

Create a specialized content generation tool that produces high-quality outputs for a specific use case.

Enhanced Requirements:

- Build a tool that generates content in one of these categories:
 - Marketing copy (product descriptions, social media posts)
 - Educational materials (lesson plans, study guides)
 - Creative writing (stories, poems with specific parameters)
 - Technical documentation (API guides, code comments)
 - Visual assets (images with specific themes/styles)
- Implement the solution using any generative AI API
- Develop at least 5 prompt templates optimized for different scenarios
- Create a prompt engineering methodology document explaining your approach
- Implement input validation and output filtering mechanisms a prompt engineering methodology document explaining your approach
- Implement input validation and output filtering mechanisms

Technical Specifications:

- User interface with at least 3 customization parameters
- Results saving/export functionality
- Performance tracking (generation time, token usage)
- Error handling for API limitations
- Documentation of rate limits and usage costs

Deliverables:

- Functional generator tool (code repository or no-code workflow documentation)
- Prompt library with 5+ optimized templates and variations
- Comparison matrix showing quality differences between prompt iterations
- 5 high-quality sample outputs demonstrating tool capabilities
- 3-page technical documentation including:
 - Implementation architecture
 - API selection rationale
 - Prompt engineering methodology
 - Performance optimization techniques
 - Limitation management strategies

CAPACITI
Tech Career Accelerator

Evaluation Criteria:

- Output quality and relevance
- Prompt engineering sophistication
- Implementation completeness
- Technical documentation clarity
- Creative application of generative AI concepts

Submission :

- Further instructions will be communicated on how to submit.

Let me know if you have any questions.

Thank
